

Mids & Ends = 25% each

The other 50% is a team project, 2 reports ($\geq 25k$ words) with group presentation and viva. (individual)

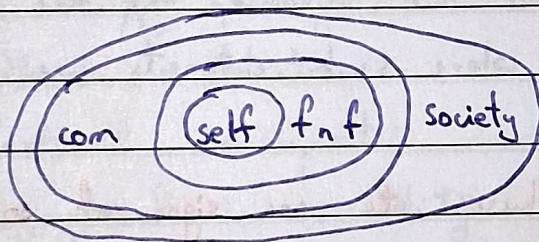

Find out a social problem or a social phenomenon

↳ gender dynamics in the modern world

↳ how do apps change the way dating works etc.

Find the problem in midsem, and fix it in the endsem

Avoid techno-solutionist ideas in the answers

incel culture is a societal discourse spanning the society and the self

self & family → continuous negotiation & power hierarchy

~~patriarchal~~ patriarchal society needs

the individuals to have the same opinions as the family to maintain the status quo.

↳ society

"what would they think?" ← sociologists question these ideas, and superstitions and common sense. Stereotypes asw.

Discrimination - judgements passed on what they are, not what they know - judgements passed on the self.

↳ Gender

↳ Caste

↳ English

Power dynamics remain until questioned - this causes these problems that sociologists question.

People don't speak out because they are afraid to lose the group where such statements are passed.

Slurs, slang, abuses, etc are signs of solidarity.

Sociologists have to practice the art of skepticism.

Social structure:- How is society stratified - Gender, class, caste, etc.

Social institution:- Category that tries to reward and punish certain practices - Family, etc.

Agency:- Capacity to change and transform social structures.
Ability to transform common sense.

Problems with education?

- ① English Hegemony
- ② Rep. + Diversity missing
- ③ Compulsion to Sci
- ④ Rank > Interests
- ⑤ Lack of ~~liberty~~ liberty
- ⑥ Caste + Reservation
- ⑦ Privatisation
- ⑧ Discouragement of extra curricular activities
- ⑨ Poor teaching quality
- ⑩ Welfarism + education
- ⑪ Emotional development
- ⑫ Geographical inaccessibility
- ⑬ Rote learning & lack of skill development
- ⑭ Lack of infra
- ⑮ Outdated syllabus
- ⑯ Crit. Thinking
- ⑰ Learning how to become an adult.
- ⑱ Corruption
- ⑲ Compensation for teachers
- ⑳ Overworked govt. teaching
- ㉑ What is success?

mesh/network → intersectionality

- Complicated structure that can't be fixed easily

The network needs to be understood before fixing the problems

What is Sociology?

Study of people in society. Behaviour of people.
To study social movement. To study rules and norms.

Let's study DisCos!

Say: some people are found with weed in a mixed dorm / boys hostel / girls hostel

This is a regulated personal space (same as family
- rules/norms are unsaid and enforced by people (in hierarchy))

privacy & personal space or not

The person rooms are liminal spaces, the personhood is obfuscated in nature.

↳ Contextual Privacy

Institutions in power create this context.

DisCo begins with retelling, and then explanations.

What explanation? Throw mates under the bus?

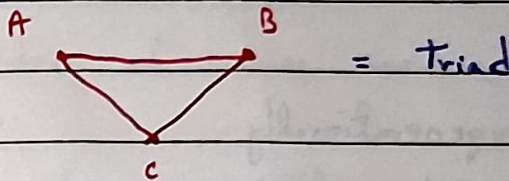

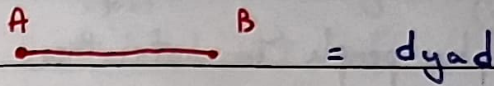

When does solidarity break down into individuals?

Medical use? - Banned in India - But what if I'm from Germany?

This turns into a negotiation, appealing to their moral and empathetic selves. But they'd follow a rulebook.

These rules are dependent on culture, history and other social factors, $\exists$ no one umbrella rule (book)

The narrative changes based on the gender.

So sociologists are interested in studying such cliques vis-a-vis the whole networks.

Community :- communities

Religious sects, linguistic sects, racial communities, caste communities, regional communities

A group of people with shared culture & norms, and maybe shared aspirations. Some of these are ascribed, some are achieved.

Society :-

Much larger than communities

Capitalist progressive idea - Individualism, all are equal, no one should impose upon the other.

Certain communities are sought after - utopia / imagined.

Institutions:- Social body regulating individual practices and behaviours
Marriage, Market, State

Structure:- Used to place people to ^{have} not to others
Class, Class, Gender

Practice:- Recurs intergenerationally
Dowry, Care (in family/household)

Process:- Something ongoing temporally and spatially
Migration, Urbanisation, Ghettoisation

Communities have internal fractionalisation

Development of Society

Reformation:- Movement against the Catholic Church, rise of Protestantism. Against the power of the clergy by atheists, merchants, kings etc. Earned money by declaring everything as sinful and asked payment for being cleansed.

The plebeians felt that the Catholic Church was intruding into their private life.

The Clergy Transgressed into the duties of the Nobility.
↳ Everyone can seek God in their own way

Capitalism (on paper) gives us the ability to choose.

classmate

Date _____

Page _____

This leads to the

Renaissance :- Rebirth (culturally). Belief that all humans are equal. The beginning of the scientific revolution. The establishment of a lingua franca and a specific notion of science is due to Colonisation. The other ideas of science were crushed.

Augustus Comte (?) observed the change in society during the French Revolution.

↳ Everyone is equal.

We've created a demand in the Services because one can "earn more" there. Hence the migration from other sectors into the services.

Race to the bottom :- Companies go where the labour was/is the cheapest.

Industrial Revolution :- Breaking of the feudal order, migration to the industrial centres (for freedom). Wouldn't have happened if the village economies had reformed themselves.

Would have failed w/o colonisation - Primitive accumulation

Anthropology studies the question of "others"

Naneseke - book!

classmate

Date _____

Page _____

They tried to establish the race theory.

Indology:- No fieldwork, just study through written works & other reports.

M.N. Srinivas - India is a collection of villages

Sociology stressed on consented surveying.

Freedom in India was the conflict b/w the Indian Bourgeoisie vs the UK Bourgeoisie. Acc to Desai.

Social Reproduction - not just biological reproduction, but they reproduce labour as well.

↳ role of the women

Zimmer - Gisselschaft & Gemmigschaft (??)

↳ You need to lose a little of the village when you move to the city.

~~Marxist~~, ~~Functional~~

Conflict Theory:-

↳ Abstract way to describe a phenomenon

"2" Aka model.

Why models - Gives us a relative scale.

Helps understand causation

Sociology :- Multiple theories can explain the same phenomenon

Human society has always been in a state of turmoil/chaos.

↳ Marxist Theory.

Rousseau says that there is an innate call for a state to rule us (humanity)

Society is stratified into classes

↳ what kind of economic resource do you hold as an individual or a social group

Since the hunter-gathering age, we've always been in a class-struggle

↳ If you collaborate with the other class, you would be worse off (proletariat with the bourgeoisie)
↳ ideal categories

Two modes of thinking :-

1) **Survival of the fittest :-**

↳ Charles Darwin from Herbert Spencer

Everyone has a fixed role in society (like the organs in a body)

There is always evolution within these roles, and only the

Bugonia - Emma Stone?

Find a social problem or a social phenomena.

Lit review.

classmate

Page

fittest (mechanism for survival) survive evolution.
But this competition is what Marx calls continuous conflict.

What is the ~~not~~ condition of a worker?

Assembly line in factories

Each person does only one bit of work

They are in a state of alienation, they don't like working because they don't draw any value from the action

Marx tries to methodologically study the labour question/process
↳ split society into Bourgeoisie & Proletariat.

Anything produced comes from capitalistic machinery

Raw Materials + Tech + Labour + Land → Commodity in Factories.

Getting stocks in CTC makes us feel better since we feel like we've done something intellectual.

At each step of the production process, ∃ a specialist.
↳ specialised task.

↳ fruit of

capitalism.

Entrepreneurship - art of creating value

But where is value addition happening?

- ↳ Only happens because the labourers are working
- ↳ Because humans are capable for of being creative and adding value to objects

Capitalistic companies usurp values by commercialising design by IP.

Profits are realised only in the market.

Capitalist class appropriates the surplus during sale (profits)

But who gave them the right to do so?

Because they own the means of production

We need labour to use Raw Materials, Tech or Land ^{even these need labour to be usable for production}

It is labour that does value addition

Then why isn't the labourers not given a part of the profit?

Why are they given a wage?

The wage is always less than what we deserve.

If we were given what we are due, then there would be no surplus

Human species can naturally draw value from Nature.

Modernity came to be with the idea of a commodity

Capitalism decoupled the labourer & the hirer (nobles)

Unskilled labourers are replaceable, skilled labourers are not.

Agriculture doesn't need corporate interests.

Humans are capable of adapting & innovating for their subsistence.

Development of Science → Everything gets objectified.

↳ Whatever we produce is objective.

But they have subjectivity & biases.

All forms of social interactions are compressed into commodities.

↳ Commodity Fetishism.

Alienation:- Marx from Hegel.

Instrumentalism - We will do whatever we need to get ahead in life.

This results in alienation b/w body & spirit for Hegel.

Marx on the other hand says that $\exists$ an economic base on which everything social is built as a superstructure.

Simple questions like "What am I doing here?" is obfuscated.
The heart of alienation is economic alienation.

Man's own deeds enslave him instead of being controlled by him.

Four kinds of alienation

(i) Man & his producing activity :-

↳ work, tightening a screw and supply chain etc.

Even the capitalists can get alienated → competition.

Most of Indian Economy is monopolised, goes against nature.

(ii) Man & his product :-

No sense of ownership or completion from the final product.
To consume is to have power & agency

(iii) Man in relation with other men :-

Man The people owning do not relate to the workers
How is there inequality after the French Revolution & the Reformation.

(iv) Man and his species :-

Humans become estranged from the inner calling of creativity
We do not take questions because we're alienated from our species

Town-village enterprises → China

Exploitation:- Usurpation of value-

Labour time - social ^{necessary} reqd time to produce a commodity

Labour power - max amt of labour that can be done in a day

Objectification of labour is not possible because labour is creative & subjective.

Emile Durkheim:-

↳ Social fact

Social integration:- How do people relate to each other

Social regulation:- How are people regulated

Ref laptop for notes

Max Weber:-

Fights the ghost of Marx

Marx argued that all (social) problems have their base in ^{the} economy

↳ Caste, for instance!

But the relative casteism within castes is inexplicable by this theory.

It homogenises a multitude of micro processes.

Social Action:- Sociologist deals with the dynamism in society

↳ differentiated by the rationality behind it because of

Action needs some movement/effort because of inertia.

Intersection b/w action & intentionality $\rightarrow$ social action.

Advertisements try to convince us to make our normal actions into social actions with their intentionality.

- 1) Social action encompasses all forms of human behaviour.
- 2) It involves assigning a subjective meaning to the behaviour.
- 3) The individual or the individuals acting consider the behaviour of others.
- 4) Social action is directed towards a specific goal or course.

Social actions give rise to cooperation & conflict. Gives rise to empathy. Everyone has a "rationality" for their action $\hookrightarrow$ put ourselves in the others' shoes.

$\hookrightarrow$ ideal

One must understand rationality of criminals to fix society.

Marriage is a contract:- Social acceptance of conjugality.

$\hookrightarrow$ This is why the state is involved into this contract.

marriage gives order to society.

Ideal Types:- of social action

- called :- rational cause & choice
- (i) **Instrumental Rational**:- Calculating. Maximising Gain.
Capitalism $\rightarrow$ increasing instrumental rationality.
Attain goal in any way possible!
 - (ii) **Value Rational**:- Driven by certain values - like honour.
 - (iii) **Traditional**:- Dictated by customs & beliefs $\rightarrow$ obeying to certain norms due to conditioning $\rightarrow$ no "choice" or "thinking" $\rightarrow$ driven by social institutions like the family. Requires continuous socialisation.
 - (iv) **Affective**:- Product of emotions.

Social actions can be perceived in varied ways. $\Rightarrow$ many rationalities for any social action.

Social Action Theory:- Ref. slide.

We attach value to the symbols to associate with the idea of a nation &

Sense of imagined community builds a nation

Patriotism $\rightarrow$ Social Act ; Instrument - Nation State

Weber's Iron Cage of Instrumentality :-

Instrumental Rationality features

- $\hookrightarrow$ Actions are quantifiable
- $\hookrightarrow$ Everything is calculated
- $\hookrightarrow$ Efficiency is the only goal.

Enchantment will die out cause of instrumentality.

Ideal Type

Comes from hyper-rationalisation.

Created to understand reality by comparison

Culture :- Social artefact used to understand how people live their lives. Aspirations, thoughts, social norms etc.

Go through historical document, go through what people think something is to create an ideal type.

Ideal type of socialism

All of us are rational (instrumental) individuals

No need of governmental regulations - invisible hand (competition)

States should print currency & protect capitalistic institutions

Expand local market & embed in the global ^{market} domain

~~Individer~~ Indian capitalism is an aberration because we're still ruled by feudal ~~hords~~ ideals.

The state is also a financial vehicle.

Weberian reasoning for the rise of capitalism :-

Changes at the level of culture.

Centuries of changes → rise of this disposition

Predestination ← Reformation is where this arose.

↳ Individual relation to God, no need of clergy

↳ Individuals can choose to pay or not pay the tithe.

↳

Economic Traditionalism :- Only the necessary work is done.

Primitive ~~communism~~ communism

Economic Rationalism :- You are only successful based on the surplus generated

↳ Results in the rise of science.

The attitude towards work is affected by religion

Calvinism centres work instead of prayers & rituals

as

~~Worldly~~ Worldly Asceticism :- Must be frugal.

work $\leftarrow$ surplus

Surplus must be re-invested into the process.

Success in work $\rightarrow$ signs for salvation

Work:- Rational & interpreted as obedience to the commandment of God.

Individuals have been set free

Capitalism is closely tied to Calvinism.

Before Capitalism:-

Guild:- Master Craftsmen, Apprenticeship, Devise etc.

Organisation of people with varying levels of specialisation.

PCP:- Petty Commodity Producers - families producing according to their own rules.

Independent Farmers

When capitalism appeared, they wanted to impose structure upon this to realise profits.

Usurp guilds & replace with factories.

$\rightarrow$ Subsumption of labour:- Formal & Real $\rightarrow$ Completely cannot be absorbed into factories & broken down & absorbed into so instead make the state impose systems where: the modes of wages & economy similar to capitalism. production, the profits realised lacks technology & division of labour etc are owned by capitalists

Work can happen in any form but profits are realised by capitalism $\rightarrow$ only at some levels

Reorganisation into capitalism
 $\rightarrow$ Direct intervention at every level

In Europe, a women's potential is only realised in the household - house wife-isation

→ Maintenance

Home Science → Genetics, "women are born to do this",

↓
Naturalisation of Housewifisation

Is there Does the household contribute to the value added by labour?

Social Reproduction :- Process through which the production realm benefits. Activities through which labourers of the next generation are produced (through biological reproduction)

Commodity Fetishism isn't thought about for the household.
wagelessness

Food we eat home is a commodity $\Rightarrow$ cultural issue.

But why?

Dominant ideology of Patriarchy $\rightarrow$ ensures household work is thought of as care, duty or love.

This benefits the State and the Capitalistic Institution

✓ If a deficit of care in the market $\leftarrow$ always compensated by women.

If the family can't afford care, the community takes care of them (slums)

West vs Rest:-

Debt in production → transferred to the social reproduction sphere.

It is the social reproductive sphere that subsidises & sustains the production/capitalist sphere.

Structural issues & conjugated oppression

Informality in Global South → devalues work done by women due to their role in housework.

6. Not just households, there multiple forms of social institutions that perform social reproduction. Wearing ethnic when foreigners show up is a form of social reproduction by performing culture.

This is not reciprocated. They have this leverage because they are investors.

GCC:- Global Commodity Chain. How does a commodity come into being & what countries are part of this production chain, etc.

Institution of family is not the only socially reproductive space.

Wagelessness is expected for some part of the work we do in the Global South - in the field of care

Deepening labour control - stay in labour colony means the work time is no longer limited to 8 hours.

(for migrant labourers) - Complete dependence on the employers

Communities of Practice:- Places where training happens unofficially - social care.

Calculating Exploitation:-

In GCCs, is the exploitation spread across multiple nodes or is it concentrated at some nodes?

Exploitation is pushed down the line.

Only through exploitation that profits can be realised by global production chains.

Ethical Consumption:- Individuals are responsible now since the shopfloor has disappeared & the world is the shopfloor now.

Modern inform technology & transportation technology leads to GCC formation.

Historically, human society also creates demarcation / ranking.

Non-existent in primitive communism / hunter gatherer society, solely dependent on physical ability.

how affluent are you
? wrt others.

These days demarcation happens through class

Ranking (Stratification) was thought to be natural: → results in privileges
This leads to inequality → characteristic of class society.

Poverty → ~~inherent~~ incapability of upward social mobility

Inequality is related to capacity

Marx said 7 2 classes in matured capitalism. But that is not the case in modern societies.

Bourgeoisie is not replaceable → have control over the means of production

CEOs are, on the other hand, replaceable.

Around the turn of the millenium, parts of the formal employment got converted into informal employment.

Supposed to be a process of proletarianisation → ↑ formal employment → This gets stopped by contracting & subcontracting
What about class consciousness?

Pauperisation

Weberian class: - Resources that one has (beyond economics culture, social network etc.)
, stuff like education is also included

Class is a disposition - how do they carry themselves etc. Social Standing.

Social Network

Education

Economic Capital, Social Capital & Cultural Capital

All three are ~~inter~~ inter convertible

Power & status & reputation of the employment
 ↳ product of class.

Symbolic Capital :- Prestige.

of status, prestige & power
 India is currently in conflict about who is more
 important b/w Civil Servants & Entrepreneurs

Resulted in the generation of "lateral entries"
 entrepreneurs being roped into civil ^{service} ~~servant~~

Party :- Coalitions within social groups

Class Structure is supposed to be a malleable stratification
 & sole focus on merit - with merit, one can transcend
 class.

B/w China, USA & India, the former two are focused
 on New Tech & Novel IPs

Service Sector in India is the only sector that affords
 the ability to transcend class.

But even this sector does not create new IPs.

Psychometry - gauging the abilities of people based on their physical features.

classmate

Date _____

Page _____

Train Song - Gully Boy - Watch video.

Indian novelty runs on franchising.

Gender & ~~sex~~ sexuality might be a choice, but the stratification continues. The pay divergence b/w men & women is a prime example.

It is very difficult to transcend stratifications like race, caste, gender etc.

Hence Marx says capitalism is a process of change/improvement from feudalism.

Caste:-

Dumont:- Book-view. Studied the Dharmashastra in France. About the processes of purity & pollution.

Build strict boundaries $\rightarrow$ crossing means pollution.

The classes ~~for~~ thus formed are black boxes.

Maintained by ^{marriage within caste} endogamy, restricted social contact

Caste has its roots in Hinduism, but is prevalent across ~~south~~ the Global South. For ex:- Biraadari in Islam

Book view vs field view.

Ran Rahim's cult got famous because of caste stratification across South Punjab & Haryana.

When lower castes moved in from Bangladesh around 1975 still have no Indian documents because they had no social connections. Upper caste, on the other hand, has are comparatively better off.

Varna ~~Kati~~.

↳ Broad Classifications

↳ Brahmins, Kshatriyas, Vaishyas, Shudras

↳ Based on occupation

↳ Some scriptures compare this to the human body (the Brahman)

↳ Argued that humans are not malleable - immutable categories

↳ The specific locations assigned to the varnas

are symbolic of how much damage the society can take. No headless humans = No Brahminless society

↳ Gives typology, not a fine grained division!

Jati

↳ Finer grained dist. division

↳ Based on regional variations

Caste gives a sense of imagined community

India has a strong caste-class correlation

Patron-client relationships b/w Brahmins & the rest.

Creation ^{of} dalits → outside the varna system → do work beyond ~~these~~ done by the 4 varnas.

Being within the varna system ⇒ can do Hindu rituals.

Dalits :- Sanitation, Cremation, Manual Scavenging, Menial Services, Animal Entrail Removal.

↳ Currently have Govt jobs / Private jobs but again only the Dalits apply

A disparity / wealth inequality exists along the caste lines, which is why the upper castes have fallbacks instead of "Dalit" jobs. This is the problem with pure meritocracy here → only those with resources can improve their social standing.

Caste transformed from a social stratifier to a political stratifier.
Vote banks etc.

Possibility of free time / leisure is only for the upper-castes, not for Dalits.
